

■ **Background**

Imagine you have been hired to write a book entitled “The Professionals Guide To Shoe Tying”. Wow! What a compliment!

Now that you have gotten over the initial shock - you need to get to work. You were selected, in part, because you have had training in the **Scientific Method**. And the publisher wants a book that offers directions for tying a shoe, written in a scientific manner.

In the space provided, draft at least one set of written instructions meant to walk a person through the process of tying their shoes. Your instructions (a.k.a. procedures) should be in a numbered list - and be as detailed as needed so that anyone who can read can tie their shoes using your procedures.

Tying a shoe is defined as the act of starting with a laced-up, untied shoe, and through the act of tying the lace the shoe lace ends up being tied in a single bow.

■ **Assignment**

In the space provided, draft a numbered list of your shoe tying procedures. Using the procedures you have drafted in-class, type a final set of procedures to be presented in-class, and turned in as a homework assignment.

■ **Draft Of Your Procedures**
